PROFESSIONAL SUMMARY

Computer Science undergraduate at IIIT Bhopal with a strong foundation in Data Structures & Algorithms, Operating Systems, DBMS, and Computer Networks. Currently interning at the Indian Biological Data Centre (IBDC), building SQL- and MongoDB-backed data visualization dashboards on Linux, and using AI tools with prompt engineering to accelerate development. Seeking software development / data engineering internship opportunities.

TECHNICAL SKILLS

- Languages:** C++, SQL, JavaScript, PHP, HTML, CSS
- Databases:** MySQL, MongoDB
- Data Visualization:** amCharts 5
- Operating Systems:** Linux (Ubuntu) — CLI, file & process operations
- Tools & Platforms:** VS Code, MySQL Workbench, MongoDB Compass
- AI / Prompt Engineering:** Prompt Engineering, GPT-assisted development workflows
- Core CS Subjects:** DSA, Operating Systems, DBMS, Computer Networks, Design & Analysis of Algorithms, Computer Organization & Architecture, Data Mining & Warehousing

INTERNSHIP EXPERIENCE

Data Analytics Intern — Indian Biological Data Centre (IBDC)

Jun 2 – Jul 17, 2026

- Onboarded on data centre infrastructure fundamentals, then strengthened SQL querying (MySQL Workbench) and learned to handle unstructured data with MongoDB Compass.
- Built proficiency in Linux (Ubuntu) CLI for file operations, and ran SQL and MongoDB queries directly from the terminal.
- Worked with a 5-year, state- and month-wise COVID-19 genomic lineage dataset from IBDC scientists to build two data visualization projects.

COVID-19 Lineage Distribution — Stacked Column Chart | SQL, MongoDB, amCharts 5, JavaScript

- Analyzed state-wise and month-wise COVID-19 lineage sample data spanning 2020–2025.
- Wrote SQL aggregation queries to group and transform lineage data for charting.
- Built an interactive 100% stacked column chart using amCharts 5 to visualize shifting lineage proportions across states.

COVID-19 Lineage Analytics Dashboard (3-Level Drill-Down) | PHP, MySQL, JavaScript, amCharts 5

- Built a three-level interactive dashboard for COVID-19 lineage data across Indian states: a state-wise heatmap (L1), year-wise trend lines with drill-down (L2), and lineage-group pie distribution (L3).
- Designed SQL queries involving joins, grouping, and aggregation to power the multi-level drill-down.
- Built PHP APIs to fetch processed lineage data from MySQL and serve it as JSON to the amCharts frontend.
- Used prompt engineering with AI tools to speed up development, while applying independently learned SQL and query-design concepts.

ACADEMIC & PERSONAL PROJECTS

Brain Tumor Dataset Analysis | Python, Google Colab, Naive Bayes, SVM

- Built a classification pipeline in Google Colab, implementing and comparing Naive Bayes and SVM classifiers on a brain tumor dataset.

College Website Replica | HTML, CSS, Tailwind CSS

- Built a responsive replica of the college website as a personal practice project (with AI assistance), implementing navigation bars and image sliders.

EDUCATION

Bachelor of Technology in Computer Science Engineering

2024 – 2028 (Expected)

Indian Institute of Information Technology (IIIT) Bhopal

- Currently entering 5th Semester | Current Semester CGPA: 8.10 | Overall CGPA: 7.49
- Relevant Coursework:** Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, Design & Analysis of Algorithms

PROBLEM SOLVING

- Regularly solve Data Structures & Algorithms problems on LeetCode and CodeChef — Arrays, Linked Lists, Binary Search, Trees, Graphs, Dynamic Programming, and Recursion.
- Consistent practice of algorithmic thinking and competitive problem solving.
